***26 OCTOBER 2007***

**AUSTRALIAN COMPANY'S ENERGY SAVING PRODUCT  
IN LINE FOR TOP INDUSTRY AWARDS**

A highly efficient solar hot water system, has been declared a finalist in two categories for this year's *GreenPlumbers*® Awards. The evacuated tube system, developed by Hills Endless Solar is the only hot water system to be endorsed by Planet Ark. The awards are a national industry showcase for environmentally-conscious products and services and are highly regarded by the plumbing, building and design industries.

Hills Endless Solar's gas boosted evacuated tube solar hot water system is up to 40% more efficient than the traditional flat plate solar heaters and can save the equivalent greenhouse emissions of a family car every year. Operating nationally, Hills Endless Solar is a rapidly growing Australian company specialising in solar products that utilise evacuated tube technology. Their design is now exclusively licensed to Hills Solar - part of the environmental initiatives of Hills Industries across Australia and New Zealand.

Hills Endless Solar products dramatically reduce household energy costs and greenhouse emissions. They are designed to exceed Australian Standards requirements and they are built to last.

"The result is an incredibly efficient system to harness the heat of the sun even in extremely cold areas," said Stephen Standish, Managing Director of Endless Solar Corporation.

"Because the system is so efficient, it doesn't require full sun and can work on cloudy or even rainy days."

These qualities have gained Hills Endless Solar a finalist position in both the Energy Efficient Product of the Year and Product of the Year categories at the 2007 *GreenPlumbers*® Awards luncheon, to be held in Melbourne on 20 November 2007.

*GreenPlumbers* is an innovative training and accreditation initiative developed by the Master Plumbers' and Mechanical Services Association of Australia (MPMSAA) as the gateway to a 'green' plumbing business.

The *GreenPlumbers*® Awards are a way for the Association to acknowledge the contributions made to the environment by individual plumbers and manufacturers.

So far the *GreenPlumbers*® training program has saved Australia more than 3 billion litres of water, equivalent to 4700 Olympic-sized swimming pools and millions of dollars in energy savings.

Saving energy is what Endless Solar's products are all about.

Stephen Standish said that "last year's sales are conservatively estimated to have a total effect of removing more than 50,000 tonnes of CO2 from the atmosphere.

IN LINE FOR TOP INDUSTRY AWARDS**

Current sales projections are likely to more than double last year's figure over the next financial year. ”.

“Hills Endless Solar products are designed by Australians specifically for Australian conditions. This allows for easy installation and maximises heat collection in any part of Australia resulting in greater energy savings and less greenhouse emissions,” said Stephen.
